

MeetingInternet™

MeetingInternet is a cutting edge solution specifically designed to help meeting space managers capture more revenues by controlling access the meeting space Internet. A MeetingInternet system is comprised of both hardware (wired and wireless network equipment) and proprietary software. Because access is software driven, there is no longer a need to unplug or re-plug cables into switch ports, or turn on and turn off WiFi access points, or try to track down meeting space users who have not paid for access, but are using it anyway because there is no authentication.

For most properties, MeetingInternet installation and setup requires no upfront fees. InnFlux may charge a per-use or flat monthly fee depending on the characteristics of your meeting space.

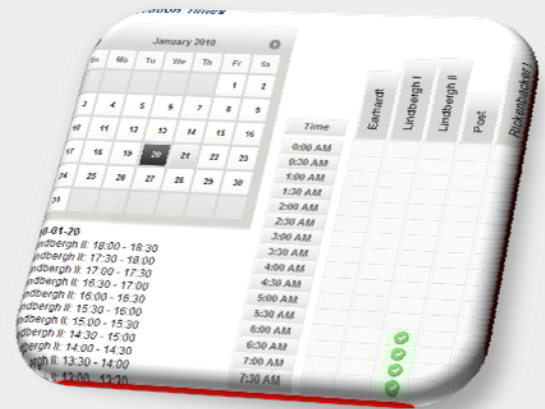

No other meeting space Internet access solution available today is as flexible or affordable

If your property's meeting space scenario has any of these characteristics, you should speak with us about incorporating MeetingInternet into your property

- Meeting Space Access requires no authentication
- You do not have enough speed for meeting groups
- You have had to turn away meeting space business because your Internet access was not adequate
- You cannot host large meeting groups because of Internet access
- Meeting space Internet is costing, rather than earning you money
- You have no way of controlling who uses the meeting space Internet, when, and for how long
- You want to specialize meetings for VIP groups, but can't

Features

- Works in conjunction with most existing HSIA networks
- Create reservations for groups, who will see the same screen and use the same access code
- Limit the number of users per group (beneficial for prepaid scenarios)
- Control speed per user (up-sell opportunity)
- Customize login pages and SSIDs (broadcasted wireless network name) per group
- Custom printable forms for meeting space coordinator, meeting group contact, and meeting space users
- Usage reporting
