

Guests are demanding more speed and reliability...

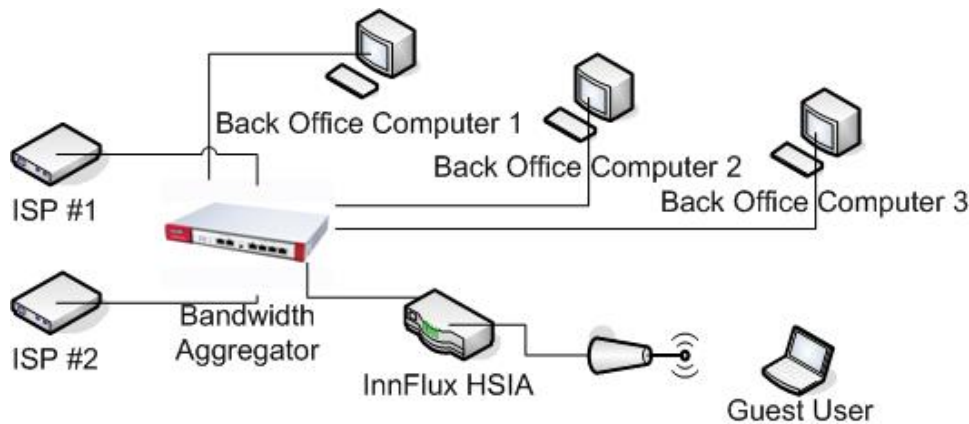

Do you have enough?

Features of InnFlux Bandwidth Aggregation Service

- Combine the speed of two ISPs**
Combine the speed of two ISPs without paying for expensive T1 ISP service
- ISP Failover option provides ultimate uptime**
When one ISP fails, our aggregator automatically sends all traffic to the other connection
- Upsell bandwidth**
Limit guests to a certain speed and sell them faster speeds
- Aggregator doubles as a back-office VPN router**
Replace your existing router with an ultra high-end router. Allows VPN sessions into and out of your network for maximum flexibility
- Traffic Policies**
Allows you to pre-determine which kinds of traffic travel on which connection by default

Bandwidth Aggregator
